www.Hartford-Ortho.com

Good Morning;

As of *April 30, 2026*, I will be transitioning from Middlesex Orthopedics and Spine Associates (MOSA) to Hartford Orthopedic Medicine (HOM), where I will focus on treating individuals in coordination with their legal counsel, who are recovering from motor vehicle accidents and injury-related cases. HOM focuses on the care of injured patients.

I am a Physical Medicine and Rehabilitation Physician (Physiatrist), who specializes in non-surgical, multidisciplinary care, including interventional spine procedures performed under live x-ray (fluoroscopy), such as epidural injections and nerve blocks. I work closely with our Orthopedic, Chiropractic and Physical Therapy teams in coordinating care. I will be available to treat your clients at my new practice with locations in Hartford, New Britain, East Hartford, Waterbury and Middletown.

I am also honored to have been recognized as a Castle Connolly Top Doctor, and I am known for delivering thoughtful, patient-centered care with strong clinical expertise.

Hartford Orthopedic Medicine provides a coordinated approach to care, allowing patients to receive the services they need throughout their recovery, including:

- Orthopedic and pain management care
- Chiropractic and Physical therapy coordination
- Diagnostic imaging services
- Structured treatment plans aligned with recovery timelines

We understand the importance of efficiency, communication, and documentation when managing injured patients. Our team is structured to support both your clients and your practice with:

- Prompt patient scheduling
- Clear and consistent medical documentation
- Coordinated care across services
- Responsive, effective communication when needed

Our goal is to make the process as smooth and reliable as possible, from start to finish. To refer a client or schedule an appointment with me or my associates, please call 860-801-6300 or email referrals@hartford-ortho.com.

Regards,

Arpad S. Fejos, MD

Integrating the best of Chiropractic, Orthopedics, Interventional Pain Management, Diagnostic Radiology, Neurology, and Physical Therapy for the Injured.
